

Flashscan Nova

Pioneering Concept Scanner-Technology
Developed for everyday use
No sprocket – no capstan – no limits

28k*

Hardware:

- Sprocketless and capstanless continuous motion transport
- RGB LED flashlight technology
- Unlimited shrinkage any film geometry definable
- Stable transport with only one tension roller, super low tension down to 20 gramme (0.2 Newton)
- Easy Wet Gate

Optical features:

- 2k camera sensor 2048 x 1546 px, optional 4k
- 12Bit uncompressed, TIFF or DPX or data reduce, recording frame by frame or directly to AVI
- Controlling via a notebook possible, recording on external USB 3.0 hard disk
- Full camera resolution usable for the picture
- (no picture pixel wasted for sound or sync)
- Manual operation of zoom, focus and panning position
- Full zoom range from 16mm edge to edge down to standard 8mm
- Scanning speed up to 50fps including sound
- Film transport up to 350fps, bobbins and reels possible

Sound features:

- Dedicated sound heads for optical and magnetic audio
- Standalone operation as a sound reproducer, no computer needed
- Synchronizable for sepomag (two strip)
- Biphase master or slave, sync to other scanners/telecines

flashSuite2 Software

- New Metadata protocol with scanning parameters, perf and user action
- Timeline programmed operation
- For a complete software list see flashsuite 2 data sheet
